Feline Castration

Your cat has just been castrated. Try to limit your cat from a lot of physical activity for about one week. You may notice that your cat has a decrease in appetite and activity for a few days after surgery, but he will be fine after he has completely healed. There are no sutures placed in this surgical area, so there is no need to return unless you are concerned that he is not healing properly or is ill. Please call with any questions or concerns you may have at (706) 232-0364.
